

What is AdapteCCa? [1]

This project is an initiative of the [Spanish Climate Change Office](#) [2] and the [Biodiversity Foundation](#) [3], which, together with the responsible Units on adaptation to climate change of the Autonomous Communities, identified the need for a tool for information exchange and communication among all experts, organizations, institutions and active agents in this field, at all levels.

The AdapteCCa platform for exchange of information on impacts, vulnerability and adaptation to climate change facilitates coordination and transfer of information, knowledge and experiences in this field between the different Spanish administrations and the scientific community, planners and managers, both public and private, and other agents, allowing a multi-directional communication channel between them.

The [National Adaptation Plan to Climate Change](#) [5] (PNACC) is the general framework for the activities of assessing impacts, vulnerability and adaptation to climate change in our country. In this context, AdapteCCa contributes to reinforce the structure of the PNACC axis of mobilization of actors and the pillar coordination between administrations.

At European level, the main reference is the [European Adaptation Strategy](#) [6]. A basic pillar of this strategy is the [European Adaptation Platform](#) [7], Climate-Adapt. This is an initiative of the European Commission to promote access and exchange of information about adaptation on the different sectors within the European policies and on the different Member States frameworks and initiatives.

The AdapteCCa national platform has been designed taking into full consideration and seeking maximum synergy with the European Climate-Adapt platform. In the design and development of AdapteCCa, the European Commission and the European Environment Agency has an important role to maximize the complementarity between both platforms.
