

Physical climate risk and finance: Insights from climate experts and investors to inform climate risk management

February 17th 2021 @ 14:30 – 16:00 CET

Financial costs of climate change are rising, and investors need more transparent information to manage their physical risks. The European research project ClimINVEST brings together climate scientists and experts and financial actors to collaborate on improved tools and information.

Join our closing webinar on February 17th from 14:30 to 16:00 CET, to get the latest science updates on physical climate risk and from our project [capstone report](#) and a showcase of case studies and an [online climate indicators platform](#) developed in the project to inform investors' risk management processes. We will also have a conversation with investors in France, the Netherlands and Norway who will share insights and experience on physical climate risk assessment in practice. Please register [HERE](#) for the webinar.

- 14:30 – 14:35** Welcome and introduction
